Pyrok Acoustement finishes are utilized for projects for their beauty, sound absorption, cleanability and ability to accommodate the architectural requirements of the computer age.

Choose Pyrok

Suspended acoustical tiles aren't appropriate or desired for many types of projects. Pyrok Acoustement has earned the confidence of acoustical consultants, architects and designers who expect materials to be decorative and perform as expected acoustically. Reworked fireproofings and insulating material may have cheaper installed costs, but can't compete with Pyrok Acoustement for beauty, superiority in sound absorption, and long-term value. The ability to be trowel finished, painted, custom colored and its non-combustibility are just some properties that make Pyrok Acoustement unique and unequaled.

Types of Acoustement

Pyrok Acoustement Plaster 20 and Acoustement Plaster 40 are both gypsum plaster formulations—ideal for application to a wide variety of surfaces including gypsum drywall.

Pyrok Acoustement 30 and Acoustement 40 are Portland cement based products—these products are compatible with unpainted concrete, masonry, and steel substrates.

Specify Pyrok with Confidence

Pyrok Acoustement products are applied through a licensed applicator network with manufacturer supervision, to ensure consistent quality and proper application at a competitive cost. And Pyrok, Inc. offers a 10 year warranty.

Contact Pyrok, Inc. or your local Pyrok representative for product samples; substrate recommendations/preparations; design details; and acoustical performance and specification guides.
